

An instruction for a sheepgut condom

www.muvs.org ©2013 Vienna

In case you always wanted to know how to prepare a sheepgut condom yourself please read the following description from approximately 1824: “Ordinary Condoms (Armour, Baudruches, Redingotes Anglaises) (Used to prevent venereal disease or pregnancy) are made from sheeps' intestina caeca soaked in water for some hours, turned inside out, macerated again in weak alkaline changed every 12 hours, scraped carefully to remove the mucous membrane, leaving the peritoneal and muscular coats; exposed to the vapour of burning brimstone, washed with soap and water; blown up, dried, cut to length of 7-8 inches, bordered at the open end with a ribband.”
